# ECONOMIC CONTEXT (Ministry of Finance)

#### National

Economic activity accelerated in the first quarter of 2023. Its performance was higher than the average recorded between 2011 and 2019. This was mainly due to the positive performance of the services sector, whose quarterly growth had not been seen since 2006. Other components of economic activity related to domestic demand grew in the first quarter of 2023. In particular, they highlighted private consumption, which registered the highest increase since 2013, and investment in non-residential construction, which accumulated five months of consecutive increases.

The main drivers of private consumption were job creation, rising real wages and domestic credit. In the first quarter of 2023 with IMSS figures, 423,000 jobs were created, an increase higher than statistical records since 1982. The unemployment rate also registered a record low of 2.7% in February 2023. At the same time, in the first two months of 2023, real wage growth was observed at 1.7% annually and a real annual increase in consumer credit at 9.6% by commercial banks.

In this context, according to the timely estimate of GDP in the first quarter of 2023, economic activity registered an annual growth of 3.9% and, with seasonally adjusted figures, increased 1.1% quarterly above the previous quarter of 0.5%. With these results, activity grew for the sixth consecutive quarter. In particular, compared to the previous quarter and with seasonally adjusted figures, secondary activities grew 0.7% and tertiary activities 1.5%, while agricultural activities fell 3.2%

With regard to the level of consumer prices, during the first quarter of 2023 the downward trend in general inflation continued and its performance was better than anticipated by the consensus of analysts. This was mainly due to the decrease in the non-underlying component due to lower annual variations in livestock and energy. These results were supported by lower prices of raw materials at international level, the continuous normalization of value chains, the better conditions of avian influenza at the end of the quarter, as well as the effects of public policies within the framework of the Inflation and Famine Package (PACIC).

#### International

During the first quarter of 2023, mixed signs were recorded in global economic activity despite the accumulation of economic shocks observed in 2022. Strong domestic demand from advanced countries, China's economic reopening, Lower pressure on global value chains and lower pressures on raw materials and energy prices were a positive surprise and helped improve growth prospects in the first three months of the year.

However, the events of early March in the banking sector -with the bankruptcy of the regional banks Silicon Valley and Signature in the U.S. and the sale of Credit Suisse, a systemically important global bank in Europe, raised uncertainty about the soundness of the banking sector in the face of international interest rate developments by central banks. While so far the risk of contagion throughout the banking sector appears to be contained due to systemic exposure and the immediate intervention of the authorities, the financial risks were skewed upwards with respect to more restrictive credit conditions and an early slowdown in global economic activity.

In addition, persistent inflationary pressures continued to be present in the major advanced and emerging economies, and despite the fact that general inflation fell due to the effects of restrictive monetary policies and lower supply-side pressures, inflation remained above central bank targets. For its part, core inflation remained high in advanced countries due to labour demand above their supply and a service sector under pressure from high wage costs and high prices of imported food. This again generated uncertainty about the level of the terminal rate and the lagging effect of monetary policy on economic activity.

During the first quarter of 2023, the GDP of the US economy showed real growth of 0.3% in its quarterly variation, according to preliminary figures. While this figure was below the growth observed in the previous quarter of 0.6%, it was higher than expected by the Blue Chip consensus of -0.1% on January 10, 2023, attributed to the strength of domestic demand.

In the first quarter of the year, timely and forward indicators suggested positive economic growth for the euro area, supported by the strength of the services sector and the resilience of industrial production, despite recent episodes of volatility in the financial sector, in particular following the sale of Credit Suisse to UBS on 19 March 2023

## MACROECONOMIC PERSPECTIVES ABOUT KEY INDICATORS

Entity		restic Product growth %	Inflation (% dec/dec)		
	2023	2024	2023	2024	
International Monetary Fund	1.80	1.60	6.30	3.90	
OECD	1.60	2.10	5.70	3.30	
Bank of Mexico Survey*	0.98	1.85	5.05	4.10	
Ministry of the Treasury and Public Credit*	3.00	3.00	5.00	4.00	

\* For the case of the Banco de México survey, the variation in GDP and inflation considers expectations from the median and in the case of the SHCP point result.
