Macroeconomic Indicators

International

- The International Monetary Fund's Executive Board (IMF) Article IV for the United States considers the following:
 - The U.S. economy has gone through a temporary growth dip in the last two quarters. Lower oil prices led to a further contraction in energy sector investment and a strong dollar and weak global demand have weighed on net exports.
 - On the upside, real household disposable income is growing at 3 percent, the housing market is growing at a healthy clip, and the current fiscal and monetary policy mix is supporting the economy.
- IMF's Executive Directors noted that, while the outlook remains broadly favorable, there are important downside risks and uncertainties:
 - Slower potential growth.
 - A strengthening of the U.S. dollar further away from levels justified by medium-term fundamentals, and
 - Sustained investor risk aversion following the outcome of the referendum in the United Kingdom.

Source: <http://www.imf.org/external/pubs/ft/scr/2016/cr16226.pdf>

National

- In the first quarter of 2016, Mexico's real GDP grew 2.6% compared to the same period 2015.
- It is expected, tourism GDP (ITAT) exceeds the national GDP in the first quarter 2016. GDP components associated with tourist services, such as air transport, services of temporary lodging and preparation of foods and beverages, registered annual growth rates of 17.4 %, 6.8% and 6.8%, respectively in the 1Q16.
- In may, headline inflation remained below the central bank's target of 3.0% at 2.6%. CPI components associated with tourism services (air transportation, lodging, travel package services and restaurants maintained a stable trajectory.
